# Cintia Campos, CAMS, CGBSS, MBA, MPS

**www.linkedin.com/in/cintiaccampos | MS-AI Candidate**

## SUMMARY

Accomplished Principal Data Analyst/Scientist with expertise in SQL, Python, Data Visualization, Finance, Compliance, and Project Management. Highly driven to solve complex problems, improve operational efficiency, and deliver actionable insights while collaborating to achieve shared goals. Currently advancing expertise in ML/AI through graduate-level studies.

## PROFESSIONAL IMPACT

- **Led investigation and remediation of underperformance in the Visa Token Provisioning fraud detection model** when AUC-ROC approached breach thresholds. Conducted detailed segmentation analysis across token types (Ecommerce, Card-on-file, Android Pay, and Apple Pay), identifying the segment which was the primary driver of degradation. Communicated findings through concise executive-level presentations, enabling targeted discussions with Strategy and Visa teams that resulted in (a) restricting model score usage for the affected segment, (b) formal escalation to Model Risk Management (MRM) via a Model Change Form submission, and (c) fraud tagging revision by model developers.
- **Enhanced and revised Ongoing Monitoring Reporting scripts to support multiple enterprise data migrations**, including the transition from Hive tables to Snowflake following automation of Visa data ingestion from manual CSV file processing to API-based flows. Updated logic and data mappings to accommodate migration from legacy databases to the GPM Snowflake environment, ensuring continuity, accuracy, and stability of model monitoring and reporting processes during system modernization efforts.
- **Established standardized model oversight for newly onboarded models** by designing effective monitoring frameworks and performance charts in Domino Notebooks. Implemented recurring monitoring for the BioCatch model suite, focusing on Account Opening (AO) and Account Takeover (ATO) across Web and Mobile channels, ensuring performance aligned with expectations. Established threshold-based performance monitoring (above vs. below interdiction) to address limitations in fraud feedback loops driven by customer interdiction controls, improving evaluation of model performance and customer impact.
- **Prepared comprehensive Model Risk Management (MRM) documentation packages** to support review, governance, and approval of fraud model usage. Documented model objectives, methodology, segmentation analysis, monitoring frameworks, performance metrics, limitations, controls, and business use cases in alignment with enterprise model governance standards. Partnered with Strategy, Fraud Risk, and Model Development teams to address MRM feedback, support model change submissions, and ensure transparent communication of model assumptions, risks, and operational impacts prior to production approval.
- **Solved a significant compliance gap for the AML monitoring of 'Walmart's Corporate Prepaid Gift Card Purchasing Program'.** Developed and implemented two new transaction monitoring rules and reports to support the FIU team. Leveraged eCommerce Questionable Activity Referrals and FIU investigation findings to label the dataset and score transactions and customers using rolling days window functions and a confusion matrix using BigQuery and Jupyter NB. The rules, based on the most vital features, significantly reduced false positives and improved AML efforts.
- **Designed, developed, deployed, and maintained** both recurring and ad-hoc reports, queries, analyses, and dashboards utilizing SQL, Python (Jupyter NB), Apache Spark (Dataproc), Tableau, Tableau Prep, Power BI, and Looker Studio to provide actionable insights, solutions, and answers to the Global Financial Services Compliance Group (FSC). Worked with large data sets (14B+ rows) from various systems and databases (SAS Studio, SAS VA, Google Big Query, Google Storage, Oracle Acxiom, SharePoint, etc.), including 1st & 3rd party data (Walmart, Sam's Club, Incomm, Alliance, Acxiom, TransNetwork). Executed Extract, Transform, Load (ETL) processes and conducted thorough data cleaning and analyses.
- **Applied K-means clustering to analyze entity over clustering** in AML transaction data, utilizing the Elbow Method to evaluate the "within-cluster sum of squares" (WCSS) and determine the optimal number of clusters. Labeled clusters to refine a rule-based entity-resolution model where rules were constructed from a combination of PII attributes. This analysis identified overly permissive rules that introduced a bias towards excessive clustering of entities. By adjusting these rules, I improved the model's precision in distinguishing true anomalies from noise, enhancing its effectiveness in detecting potential money laundering activities.
- **Influenced business strategy and product management at Walmart** by identifying the root cause of entity resolution under-clustering in the Quantexa tool and implementing logarithmic analysis to address skewness bias in the data. Solution allowed for a precise assessment of exclusion criteria thresholds for compound keys matching transactional data to entities. This enhancement improved data model performance by 15.5% and provided reliable, actionable insights to the Financial Intelligence Unit (FIU) investigations and decision-making.
- **Lead data quality/integrity investigations and Root Cause Analysis (RCA)** to drive effective solutions with the Reporting and Entity Resolution Workstreams. Provided coaching and code review to Junior Data Analysts during report/dashboard development and root cause analyses.

- **Extracted, Analyzed, and Transformed Inbound Transactional data** for integration into Quantexa Entity Resolution (ER) DAGs using SQL, Python, and Spark Scala. Managed data pipelines using Apache Airflow, ensuring seamless workflow orchestration, scheduling, and monitoring to maintain data integrity and successfully complete the DAG runs. Conducted tech testing and validations on ER Outbound and Entities resolved (89M+ entities) before flattening files and loading ER Tables in GCP (QA, Stage, Prod) for stakeholders' consumption (including downstream teams) and insights.
- **Participated in Agile sprint planning sessions,** defining user stories, and prioritizing tasks to meet project milestones. Drove requirements, defined success criteria, designed test cases, and signed off on User Acceptance Testing (UAT). Conducted sprint demos to showcase completed work to stakeholders and facilitated retrospectives to identify areas for improvement. Created and maintained comprehensive project documentation on Confluence.
- **Led Brightstar Corporation's global (EMEA, APAC, LATAM, and North America) strategic development of offshore operations** for multiple functions and the transition (Lift & Shift) of in-country transaction processes to a captive dedicated Shared-Services Center (SSC**)** in Costa Rica and India, managing strategy, tasks, schedules, analyses, resources, and all stakeholders, from planning to the go-live and stabilization phases, to gain labor arbitrage, centralized and standardized processes, improved internal controls and maximized profit margin. Established policies to align with corporate and in-country environments; evaluated current procedures and implemented key improvements.
- **Led the design and implementation of Publix Pharmacy's Controlled Substance Diversion Data Analytics Program**, using Azure Databricks SQL and Power BI to detect risks associated with DEA-controlled substances. Developed dashboards to identify drug diversion risks by reconciling ERX and INMAR adjustments. Collaborated with the Data Architect to define data models during the migration of the legacy data warehouse to the Cloud, cleaning data and creating ETL flows to support KPIs. Deployed the model to Power BI Premium to assist Compliance and Investigation teams in detecting and reporting risks to the DEA.
- **Executed financial planning, forecasting, and month-end close processes** across the Intel IT Finance, Flash Memory, and Engineering groups, supporting PLAN (annual) and POR (quartery) cycles and managing capital, operating expense, and headcount reporting. Delivered regular variance analysis and financial reporting across multiple organizations, ensuring accuracy and alignment between program and organizational financial views.
- **Led enterprise IT Finance governance, controls, and compliance initiatives across global organizations**, owning SOX 404 reporting, corporate E&C training compliance, and IT Reportable Events processes. Designed and implemented control frameworks, monitoring indicators, and standardized governance processes that strengthened risk visibility and ensured audit-ready compliance, consistently achieving successful internal audit outcomes with zero process breaks or control deficiencies.

## EXPERIENCE

USAA
***ML Ops - Senior Decision Science Analyst – Bank Fraud*** Jan 2025 - present

WALMART
***AML Principal Data Analyst*** Apr 2022 – Jan 2025

PUBLIX PHARMACY
***Drug Diversion Data Analyst*** Dec 2021 – Mar 2022

INNOVATIONS20
***Data Scientist (contract)*** Aug 2021 – Dec 2021

***--- in school ---*** Aug 2019 - Aug 2021

CINTIA CAMPOS ARTWORKS LLC
***President / Consultant / WordPress Developer*** Jun 2018 – Feb 2021

BRIGHTSTAR CORPORATION (LIKEWIZE)
***Director of Finance Transformation PMO*** Sep 2016 – Jun 2018

GLOBENET CABOS SUBMARINOS
***Corporate Project Manager/Analyst*** Dec 2015 – Sep 2016

MONEYGRAM INTERNATIONAL
***LATAM & Caribbean AML Regional Compliance Manager*** May – Sep 2015

INTEL CORPORATION
***Sr. Financial Analyst (FP&A, Revenue, Capital, Controls & Compliance)*** Mar 2006 – May 2015

## EDUCATION

UNIVERSITY OF COLORADO BOULDER, Boulder, CO — Est. Jun 2028

***MS in Artificial Intelligence***

- *Relevant coursework: Data Mining; Introduction to Generative AI; Supervised and Unsupervised Machine Learning*

NEW YORK UNIVERSITY, New York, NY — Mar 2023

***MicroBachelors in Introduction to Databases***

- *Relevant coursework: Introduction to Database Queries; Advanced SQL Queries; Advanced Data Administration*

UNIVERSITY OF MIAMI RSMAS, Miami, FL — Jul 2021

***Master of Professional Science in Marine Ecosystems and Society (MES)***

- *Relevant coursework: Introduction to Marine Geographic Information Systems (ArcGIS)*

BOSTON UNIVERSITY QUESTROM SCHOOL OF MANAGEMENT, Boston, MA — Jan 2002

***Master of Business Administration, Finance Concentration***

- *Relevant coursework: Quantitative Decision Making; Modeling in Excel: Optimization & Simulation*

PONTIFICIA UNIVERSIDADE CATOLICA DE CAMPINAS, Campinas, SP, Brazil — Dec 1996

***Bachelor of Science in Business Administration***

- *Relevant coursework: Applied Mathematics, Mathematical Economics, Statistics and Probability, Econometrics and Economic Statistics*

## AWARDS AND CERTIFICATIONS

- USAA Maverick Award
- Walmart Making the Difference Award (x2)
- Intel Capital (ICAP) Finance Division Recognition Award (DRA)
- Intel BARc Productivity Recognition Award
- Harvard CS50 Introduction to Computer Science
- IBM Data Science Professional Certificate
- NYU MicroBachelors, Databases
- Microsoft Certified: Azure AI Fundamentals
- Quantexa Technical Foundations (Entity Resolution)
- Apache Airflow Fundamentals
- Green Belt Six Sigma Methodology (CGBSS)
- ACAMS Certified Anti-Money Laundering Specialist (2015-2025)
